

Tables

1	Setting a context for Medicare spending	3
1-1	Medicare HI trust fund is projected to be insolvent in 2026	7
1-2	Changes in annual Medicare spending vary by setting	10
1-3	Sources of additional coverage, by selected beneficiary characteristics, 2001	18
1-4	Access continues to be generally good, 2000–2002	22
1-5	Beneficiaries differ in their reports of obtaining needed, urgent, or routine care, 2001	23
2	Quality of care for Medicare beneficiaries	31
2-1	Four Institute of Medicine goals for quality and associated measures used in MedPAC’s analysis	33
2-2	Effectiveness of care: Hospital mortality decreased, 1995–2002	37
2-3	Effectiveness and timeliness of care in hospitals: Processes of care are improving but rates are still too low, 1998–2001	38
2-4	Safety of care: Adverse events affect many beneficiaries, 1995–2002	39
2-5	Effectiveness and timeliness of care outside the hospital: The change in the rate of potentially avoidable hospital admissions is mixed, 1995–2002	41
2-6	Effectiveness and timeliness of care outside the hospital: Effective care processes are improving, but rates are still too low, 1998–2001	42
2-7	Patient-centeredness of care: Continuity and access to providers is stable	43
2-8	Patient-centeredness of care: Beneficiaries rate interactions with health care providers highly	44
2-9	Effectiveness and timeliness of care: Plans improve, but rates are still low on some measures, 2000–2002	45
2-10	Patient-centeredness of care: Medicare programs rate higher than employer-sponsored plans in 2001	46
3	Assessing payment adequacy and updating payments in fee-for-service Medicare	55
3A	Hospital inpatient and outpatient services	69
3A-1	The share of hospitals offering outpatient services has increased slightly	75
3A-2	Hospital Medicare margins, 2000–2002	79
3A-3	Overall Medicare margin by hospital group, 2000–2002 and estimated 2004	79
3A-4	Transitional corridor payments as a share of outpatient payments are highest for small rural hospitals	84
3A-5	A small set of services accounted for half of outpatient outlier payments in 2002	91
3A-6	Seventy-five percent of outpatient outlier payments were for services with payment rates of \$300 or less in 2002	93
3A-7	Distribution of claims and payments by principal reason for outpatient visit, 2002	93
3A-8	Outpatient outlier payments were not evenly distributed across hospital groups in 2001 and 2002	94
3A-9	Outpatient outlier payments were not equally distributed across hospitals in 2002	95
3B	Physician services	105
3B-1	Most beneficiaries report good access to necessary, specialty, and routine care, 2000–2002	108
3B-2	The number of physicians billing fee-for-service Medicare is increasing, 1995–2002	109
3B-3	Use of physician services in fee-for-service Medicare, for selected services, 1999–2002	113
3B-4	Medicare Economic Index weights and forecasted input price changes for physician services for 2005	114

3C	Skilled nursing facility services	121
3C-1	Among hospital-based SNFs, those that were for profit or located in urban areas were more likely to exit Medicare	124
3C-2	Volume of SNF services increased in 2001	124
3C-3	SNF patients' rehospitalization rates indicate mixed results for quality	126
3D	Home health services	141
3D-1	Most beneficiaries had no problem accessing home health services, 2000–2002	144
3D-2	The mix of home health agencies has not changed	145
3D-3	Mix of home health visits changed after the prospective payment system started	146
3D-4	Freestanding home health Medicare margin, by type of agency, 2001 and estimated 2004	149
3E	Outpatient dialysis services	159
3E-1	Total number of dialysis facilities is growing; for-profit and freestanding are a higher share over time	163
3E-2	The quality of dialysis care has improved for some measures	164
3E-3	Aggregate margins for composite rate services and injectable drugs for freestanding dialysis facilities, 2001	168
3F	Ambulatory surgical center services	185
3F-1	ASCs have lower coinsurance than hospital outpatient departments for high-volume ambulatory surgical services, 2004	187
3F-2	The volume of surgical services grew faster in ASCs than in hospital outpatient departments	188
3F-3	Most ASCs are for profit, freestanding, and urban	189
3F-4	Over half of Medicare-certified high-volume ASCs specialize in ophthalmology or gastroenterology procedures, 2002	189
3F-5	Ophthalmology and gastroenterology procedures accounted for over two-thirds of ASC services provided to Medicare beneficiaries, 2002	190
3F-6	Hospital outpatient, ASC, and physician practice expense payment rates vary for high-volume ambulatory surgical services, 2004	193
3F-7	Over half of the most common ambulatory surgical procedures were performed in hospital outpatient departments, 2001	194
4	Medicare+Choice payment and eligibility policy	205
4-1	Medicare+Choice plans and enrollment, by type of plan, 1997–2003	208
4-2	Availability of Medicare+Choice coordinated care or private fee-for-service plans	209
4-3	Plan payments are higher than fee-for-service spending, 2004	210
4-4	HEDIS measures for Medicare PFFS/PPO plans, 2004	216

Figures

1	Setting a context for Medicare spending	3
1-1	Medicare was about one-fifth of spending on personal health care in 2002	4
1-2	Trustees project Medicare spending to increase as share of GDP	7
1-3	Hospital inpatient was nearly half of all fee-for-service Medicare spending in 2003	8
1-4	Medicare spending is concentrated in a small group of beneficiaries	9
1-5	Trustees and CBO project Medicare growth rate of 6 percent over next 10 years	10
1-6	Changes in spending per enrollee differ between Medicare and private health insurance	11
1-7	The rate of change in spending per enrollee differs between Medicare and other purchasers	12
1-8	Personal health care spending is increasing as share of GDP	13
1-9	Enrollment by type of supplemental insurance, 1993–2001	19
1-10	Beneficiaries' reports of difficulties obtaining care have declined or remained stable since 1991	21
2	Quality of care for Medicare beneficiaries	31
2-1	Effectiveness and timeliness of care: M+C and employer-sponsored plans' performance varies by process measure, 2002	46
3	Assessing payment adequacy and updating payments in fee-for-service Medicare	55
3-1	Framework for assessing payment adequacy and updating payment rates	56
3-2	Relationship of overall Medicare and total margins, 1999	62
3A	Hospital inpatient and outpatient services	69
3A-1	Acute inpatient services account for the majority of hospital payments	70
3A-2	Medicare payments for hospital inpatient and outpatient services accelerated after 2000, following a period of stability	71
3A-3	Medicare outpatient PPS payments are projected to increase steadily	71
3A-4	Fewer hospitals are ceasing participation in Medicare, while many have become critical access hospitals	74
3A-5	Hospital discharges continued to grow through 2002	75
3A-6	The decline in hospital length of stay is slowing	76
3A-7	Overall Medicare and Medicare inpatient margins have returned to levels of mid-1990s	78
3A-8	Increase in costs per discharge for Medicare inpatient services has grown substantially since 1997	80
3A-9	Increase in average compensation rate for hospital employees peaked in early 2002	81
3A-10	Increase in hospital employment peaked in early 2002	82
3A-11	Two-thirds of ambulatory payment classification groups have payment rates of less than \$500 in 2004	89
3A-12	Cost-to-charge ratio for hospital patient care services fell steadily, 1985–2001	90
3B	Physician services	105
3B-1	Participation and assignment rates have grown to high levels	109
3B-2	PLI payments vary by locality and service, as a percentage of total payments under the Medicare fee schedule, 2002	116

3C	Skilled nursing facility services	121
3C-1	Medicare spending for skilled nursing facility services increased from 2000 to 2002	122
3C-2	Number of freestanding SNFs that are Medicare certified increased, while the number of hospital-based SNFs decreased to 1993 levels	123
3C-3	Hospital-based SNFs that closed had higher costs in 1998	125
3C-4	Medicaid accounted for the largest share of funds for nursing home services in 2001	127
3E	Outpatient dialysis services	159
3E-1	MedPAC's market basket index tracks actual growth in composite rate costs	169
3E-2	Productivity of dialysis facilities, 1998 and 2002	169
3F	Ambulatory surgical center services	185
3F-1	Medicare payments to ASCs more than tripled, 1992–2002	187
3F-2	Number of Medicare-certified ASCs increased over 50 percent, 1997–2003	188
4	Medicare+Choice payment and eligibility policy	205
4-1	Beneficiaries affected by plan withdrawals, 1998–2003	206
